

## The Code of Harsh Reality

By Arthur Klepchukov

02.01.2006

```
(define newProcess *
  found fatal error :: [connect]ion interrupt
    @ll significant files are corrupt.
    { execute: process.Unknown }
  Unknown => returns false. >>
  Network has no pulse.
  Un$uccessful ping.
  The modem does not ring^.
  What to execute?
  / What to compute?
  // What to refute?
  /// What human error to dispute?
```

+++Lost connection.

```
*missing argument_direction &
[purpose.PurPose.pUrpoSe == #f(else)
  a      a      a
  i      i      i
  n      n      n
```

\_circuits slain:

```
if (! Purpose) then
  try "anything\n" to ∞ <<
  * The answer isN'T everything.
```

Halt all processes.

```
<Execution undecided>
  Invalid parameter: love (unrequited) ... )
```
